

# Balance Sheet or Net Worth Statement

---

---

---

---

---

---

---

---

**Assets = Liabilities + Owner Equity**  
**Owner Equity = Assets - Liabilities**

Balance Sheet	
Assets	Liabilities
	Owner Equity

- **Assets**
  - Everything owned that has value including claims against others
- **Liabilities**
  - Any obligation owed to others at the given moment in time
  - A claim by others against the assets

A picture of the business at a point in time.

---

---

---

---

---

---

---

---

## Uses of the Balance Sheet

- Acquiring Debt
- Considering Farm Business Risks
- Measuring Financial Progress
- Calculating Profitability

---

---

---

---

---

---

---

---

**Uses of the Balance Sheet**

- Can answer such questions as:
  - If you quit farming today and put everything up for sale, how much money would you have left over after all debts have been paid?
  - What are your financial commitments for the next 12 months?
  - How much more financial risk can your business stand?

---

---

---

---

---

---

---

---

**What Entity?**

- Business vs. Personal
- Consolidated Balance Sheet

---

---

---

---

---

---

---

---

**Cost vs. Market**

- Cost
  - Cost minus use or depreciation
  - Typically more useful when measuring the financial progress of a business from year to year
- Market
  - Fair market value less selling costs
  - Used to evaluate financial position for credit analysis and estimating owner equity

---

---

---

---

---

---

---

---

**Reasons for including both Cost and Market values on your Balance Sheet**

- To determine if Net Worth changes are due to:
  - Inflation (deflation) and/or
  - Retained earnings
- Estimate deferred taxes (hidden liability)
- Market values needed to determine current financial position.
- Selected cost values needed to prepare accrual-adjusted income statement.

---

---

---

---

---

---

---

---

**Categories of Assets**

Current and Non-Current

---

---

---

---

---

---

---

---

**Categories of Assets**

- Current Assets
  - Most liquid
  - Can be converted to cash without disrupting the ongoing business
  - Will be used up or converted to cash during the year

---

---

---

---

---

---

---

---

**Categories of Assets**

- Non-Current
  - Yield services to the business over a period of time on an ongoing basis
  - Their sale would disrupt the business
    - Machinery
    - Equipment
    - Breeding livestock
    - Real estate
    - Investments in cooperatives

---

---

---

---

---

---

---

---

**Liabilities**

- An obligation that exists at the date of the Balance Sheet.
- When the obligation is due is the basis for categorizing the liability.

---

---

---

---

---

---

---

---

**Current Liabilities**

- Accrued interest and Accrued taxes
  - If you were to sell out and convert all assets to cash, the balance sheet would need to reflect all claims that existed against those assets
- Deferred taxes on current liabilities
  - Recognize the tax liability arising from the difference between the values of certain assets and liabilities and their tax basis

---

---

---

---

---

---

---

---

**Non-Current Liabilities**

- Liabilities associated with real estate or with an original maturity beyond one year, excluding the principal portion due within the next 12 months.
- Deferred tax on non-current liabilities
  - Would be triggered by conversion of non-current assets to cash
  - Only a market value liability concept (not in cost column)

---

---

---

---

---

---

---

---

**Current Assets**

- Cash on hand or in checking
  - Cash payment of an expenditure should be considered to be at the moment the check is written, not when the check clears.
- Savings and money market accounts
  - Add amount of interest accrued
- Marketable bonds and securities
  - Cost or basis includes purchase price plus any interest or dividends re-invested
  - Estimate current market value of securities from their published trading values

---

---

---

---

---

---

---

---

**Current Assets**

- Futures and options accounts
  - Value if you were to close the account
  - Account equity = total deposits + accrued profits – accrued losses – commissions

---

---

---

---

---

---

---

---

**Current Assets**

- Accounts receivable
  - Results from sale of products and services that are part of farm income
  - Sale of grain or feeder livestock, custom work
  - Government payments (e.g., deficiency payments)
  - Do not include sale of capital assets (breeding livestock, equipment—s.t. capital gains)

---

---

---

---

---

---

---

---

**Current Assets**

- Feeder livestock and poultry
  - Requires physical inventory
  - What livestock/poultry should be included?
  - Livestock you will be selling as culls during the year?

---

---

---

---

---

---

---

---

**Current Assets**

- Feeder livestock and poultry
  - Value on Cost vs Market columns?

Weight × current market price - marketing costs

---

---

---

---

---

---

---

---

**Current Assets**

- Crops and feed
  - Requires physical inventory
  - Estimate of net market value
- Exception is purchased feed and supplements (use cost)
- Don't include accounts receivable items

---

---

---

---

---

---

---

---

**Current Assets**

- Crops and feed
  - Commodity Credit Corporation loan
  - List at the higher of market or loan rate
  - The CCC loan is listed in the note section of current liabilities
  - Can show cash and crop (off-setting liability)

---

---

---

---

---

---

---

---

**Current Assets**

- Prepaid expenses
  - Not yet delivered or listed as part of physical inventory
  - Payment has been made so must show a corresponding equity position
- Supplies
  - Use actual cost for cost and market

---

---

---

---

---

---

---

---

**Current Assets**

Investment in growing crops

---

---

---

---

---

---

---

---

**Current Assets**

- Investment in growing crops
  - Prepaid expenses concept
  - Preferred method
    - Accumulate all direct (fertilizer, seed, fuel) and indirect (depreciation) costs and report at the lower of cost or market.
  - Alternative method
    - Include only the direct cash cost incurred to date

---

---

---

---

---

---

---

---

**Current Assets**

- Other current assets
  - Example would be income tax refund not yet received or has been credited to next year's tax liability

---

---

---

---

---

---

---

---

**Valuing Assets**

- Basis
- Depreciation
- Adjusted Basis or Remaining Book Value
- Capital Account

---

---

---

---

---

---

---

---

**Valuing Assets**

- Cost-minus-Depreciation or Full Cost Approach
  - Asset (livestock) is fully capitalized.
  - Capitalize: direct and indirect costs of raising the animal (or group of animals) have been accumulated, removed from farm expenses, and transferred to a capital asset account.
  - The cost amount reported on the Balance Sheet is the remaining book value (accumulate costs minus depreciation)
  - Many record systems are inadequate to support this.

---

---

---

---

---

---

---

---

**Valuing Assets**

- Base Value Approach
  - Represents the cost of raising an animal to its current condition.

e.g. Bred Heifer  
e.g. Cow

  - As each animal is transferred from one inventory to another and finally into the capital account, it is given a base or modified cost value.

---

---

---

---

---

---

---

---

### Valuing Assets

- Base Value Approach
  - This value takes into consideration:
    - Market value of the animal at the time of transfer
    - Estimated costs of bringing animals into the herd
    - Conventional practices for valuation followed by the operation.
    - Some 'safe harbor' values provided by the IRS
  - The value is the same for all animals of like kind and remains constant from year-to-year.
  - Once the animal reaches maturity, the value remains constant until it is sold or dies.

---

---

---

---

---

---

---

---

### Valuing Assets

- Base Value Approach
  - Special Issues
    - What about expenses?
    - How many transfer points?
    - Changes in value over time?
    - Purchased animals?

---

---

---

---

---

---

---

---

### Valuing Assets

- Purchased breeding stock
  - Should be listed separately.
  - Depreciate.

---

---

---

---

---

---

---

---

**Valuing Assets**

- Machinery, equipment, trucks
  - Cost Amount?
  - Trade-in?
  - Old assets that are fully depreciated?

---

---

---

---

---

---

---

---

**Valuing Assets**

Capital Lease Asset

- Characteristics:
  - Transfers ownership at end of lease
  - Option to purchase
  - Used up
- What to do?
  - Cost basis (present value of all future lease payments) and depreciate
  - List buy-out amount each year

---

---

---

---

---

---

---

---

**Valuing Assets**

- Investments in cooperatives.
  - Why not a current asset?
  - Value as cost plus allocated equities.

---

---

---

---

---

---

---

---

**Personal Assets**

- Often included when there is no distinct financial or legal separation of the farm business from family or personal affairs.
- The purpose of including personal assets is to complement the picture of the current financial position.
- Only assets that are at all times distinctly separate from and unavailable for business use.

---

---

---

---

---

---

---

---

**Current Liabilities**

An obligation must exist at the date of the statement and be due within the following 12 months

---

---

---

---

---

---

---

---

**Current Liabilities**

- Accounts Payable
  - Exits immediately after a product or service is received
  - \$100 cropland lease expense
  - \$50 March 1 and \$50 October 1
  - Balance sheet March 1?

---

---

---

---

---

---

---

---

**Current Liabilities**

- Notes Payable
  - Commodity Credit Corporation (CCC) loan
  - Harvest crop worth \$10,000
  - Get CCC loan for \$15,000
  - Balance sheet?

---

---

---

---

---

---

---

---

**Current Liabilities**

- Notes Payable
  - Operating Credit
  - Accrued Interest – amount due if paid off today
  - Principal due within 12 months on non-current liabilities

---

---

---

---

---

---

---

---

**Current Liabilities**

- Accrued tax liabilities
  - Personal property taxes
  - Real estate taxes
  - Employer payroll withholdings

---

---

---

---

---

---

---

---

**Current Liabilities**

- Deferred tax on current assets
  - Exists because of the ability to report taxable income by the cash method.
  - If current assets were liquidated, what would the tax obligation be?
  - Only an estimate.

---

---

---

---

---

---

---

---

**Current Liabilities**

- Income taxes
  - Progressive tax
- Capital Gains tax
- Self-employment tax
  - 15.3%
    - 12.4% for social security (max income limit)
    - 2.9% for medicare

---

---

---

---

---

---

---

---

**Current Liabilities**

\$258,373 Taxable Current Assets  
 (\$24,465) Current Liabilities  
 = \$233,908 Deferred income subject to tax

- Assume Federal + State = 38%
- $\$233,908 \times 0.38 = \$88,885$  estimated tax

---

---

---

---

---

---

---

---

**Non-Current Liabilities**

- Capital Lease—constitutes a financial obligation.
  - “buyout amount”
  - Present value of all future payments

---

---

---

---

---

---

---

---

**Deferred Tax on Non-Current Assets**

- Arises from the potential capital gains on capital assets.
- Capital assets:
  - Not taxed at their full sale price
  - Only the capital gain is taxed.
  - Capital gains tax is often lower than on other income

---

---

---

---

---

---

---

---

**Deferred Tax on Non-Current Assets**

- Capital assets:
  - Market value – adjusted basis
  - Exception: raised breeding stock that have not been capitalized nor depreciated have an adjusted basis (for tax purposes) of 0. Thus, their entire market value would be taxable.

---

---

---

---

---

---

---

---

**Owner Equity**

Owner Equity = Assets – Liabilities

- Components on a cost value basis:
  - Retained earnings
  - Capital contributed
- Components on a market value basis:
  - Retained earnings
  - Capital contributed
  - Valuation equity
  - Personal net worth

---

---

---

---

---

---

---

---

**Owner Equity**

- Valuation Equity
  - Market value – cost basis of all assets
  - MINUS deferred tax on non-current assets

---

---

---

---

---

---

---

---
